

I'Esprit de Preuillac

2005

About half the vineyard has clay-limestone and gravel soils, one quarter gravel, and one quarter sandy-gravel. The varieties planted are Cabernet Sauvignon (50%), Merlot (48%) and Cabernet Franc (2%), with an average age of 35 years. Between the rows of vines the soil is ploughed and there are no chemical herbicides used. There is a green harvest in June, and in August the vines undergo leaf stripping, firstly on the sunrise side to improve circulation and encourage ripening, later the other side too, the aim being to prevent rot from threatening the harvest. The wines are fined before bottling, but not routinely filtered. Preuillac: "PROYACK"
